

April 10, 2016

To Whom It May Concern:

This letter is to inform you that all National Safety Council texts used to teach cardiopulmonary resuscitation (CPR) and Basic Life Support (BLS) meet the 2015 American Heart Association Guidelines for Cardiopulmonary Resuscitation and Emergency Cardiovascular Care.

The National Safety Council not only reflects the Guidelines in our texts, but National Safety Council staff were also involved in the development of these Guidelines. The National Safety Council was an integral part of the International Liaison Committee on Resuscitation (ILCOR). This group authored the 2015 International Consensus on Cardiopulmonary Resuscitation (CPR) and Emergency Cardiac Care (ECC) Science with Treatment Recommendations (CoSTR). This document formed the foundation for not only the AHA Guidelines, but also for the guidelines developed by resuscitation councils worldwide.

I hope this information is helpful. If you have additional questions about our courses and products, please feel free to contact me directly.

Yours truly,

Robb S. Rehberg, PhD, ATC, NREMT
Director of Program Development and Training
First Aid Programs
